separate American genera towards the European horned genera

A genus sometimes united with *AceratJieriutn,* but still differin;

from it in some points, is *Aphelops (Teleocerâs)}-* This animal i

more nearly approximated to " the modern standard" of Hhino

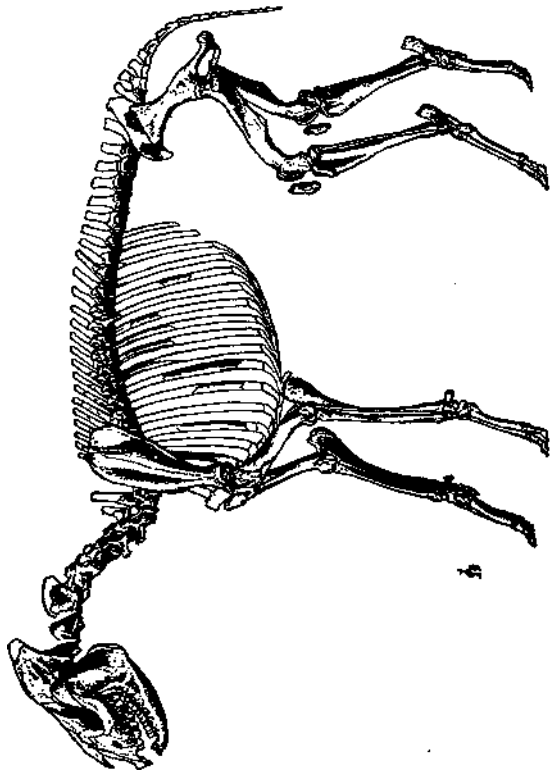

Fig. 134.—Skeleton of *Hyracodon nebrascensis.* ×1/7. (After Scott.)

ceroses than, is its possible ancestor *A.ceratherium.* The skeleton

in general is more robust, even surpassing that of modern forms

and appoaching the *Hippopotamus.* There is a reduction in the **ineisoxB,** which are limited to two pairs, and the lower molars
